

determine travel time information from the one or more redemption devices to one or more other redemption devices; and

determine an update order for causing, at least in part, a synchronization of the at least one redemption record to the one or more other redemption devices based, at least in part, on the travel time information.

**62.** The apparatus of claim **61**, wherein the apparatus is further caused to:

- determine the travel time information based, at least in part, on routing information from the one or more redemption devices to one or more other redemption devices,
- determine contextual information, mode of transport information, or a combination thereof associated with the routing information,
- wherein the travel time information is further based, at least in part, on the contextual information, the mode of transport information, or a combination thereof.

**63.** The apparatus of claim **61**, wherein the apparatus is further caused to:

- determine that at least one of the one or more other redemption devices is co-located with the one or more redemption devices; and
- cause, at least in part, a prioritization of the at least one co-located other redemption device in the update order.

**64.** The apparatus of claim **63**, wherein the apparatus is further caused to:

- cause, at least in part, an establishment of an ad-hoc connectivity session between the one or more coupon redemption devices and the at least one co-located other coupon redemption device; and
- cause, at least in part, a synchronization of the at least one redemption record to the at least one co-located other coupon redemption device via the ad-hoc connectivity session.

**65.** The apparatus of claim **61**, wherein the apparatus is further caused to:

- determine that at least one of the one or more other redemption devices is not co-located with the one or more redemption devices; and
- determine at least one location associated with the at least one non-co-located other redemption device,
- wherein the travel time information is determined from the one or redemption devices to the at least one location.

**66.** The apparatus of claim **61**, wherein the apparatus is further caused to:

- determine that the one or more redemption devices, the one or more other redemption devices, or a combination thereof are in an online mode; and

cause, at least in part, an initiation of the synchronization during the online mode.

**67.** The apparatus of claim **66**, wherein the one or more redemption devices, the one or more other redemption devices, or a combination thereof enter or exit the online mode according to a redemption threshold criterion, a schedule, periodically, on demand, or a combination thereof.

**68.** The apparatus of claim **61**, wherein the apparatus is further caused to:

- cause, at least in part, a configuration of the one or more redemption devices, the one or more other redemption devices, or a combination thereof with a list of the one or more coupons,
- wherein the list associates the one or more coupons with respective one or more coupon identifiers.

**69.** The apparatus of claim **61**, wherein the at least one redemption record specifies at least one of the one or more coupon identifiers and at least one redemption location.

**70.** The apparatus of claim **69**, wherein the apparatus is further caused to:

- determine to cause, at least in part, the one or more redemption devices, the one or more other redemption devices, or a combination thereof to enter an offline mode following the configuration.

**71.** The apparatus of claim **70**, wherein the apparatus is further caused to:

- determine to cause, at least in part, the one or more redemption devices, the one or more other redemption devices, or a combination thereof to enter an online mode based, at least in part, on a threshold value for a number of the at least one redemption record.

**72.** The apparatus of claim **71**, wherein the apparatus is further caused to:

- cause, at least in part, an initiation of the synchronization of the at least one redemption record among the one or more redemption devices, the one or more other redemption devices, or a combination thereof based, at least in part, on the update order.

**73.** A method comprising:

- determining at least one redemption record for one or more coupons at one or more redemption devices;
- determining travel time information from the one or more redemption devices to one or more other redemption devices; and
- determining an update order for causing, at least in part, a synchronization of the at least one redemption record to the one or more other redemption devices based, at least in part, on the travel time information.
